

Integrating COM and Java using Microsoft solution

Jie Ren

Information and Computer Science
University of California, Irvine

Why

- ★ To combine two great technologies

How?

- ★ To call Java in COM,
 - ActiveX Bridge for JavaBeans(Sun)
 - ★ enables JavaBeans to be used in a COM container.
 - Enterprise Edition Client Access Services COM Bridge(Sun)
 - ★ allows COM clients to access EJB components.
- ★ To call COM in Java,
 - Java2COM(Neva)
 - Bridge2Java and OLEBridge(IBM)
 - JACOB(Dan Adler, open source bridge)
 - jacoZoom(infoZoom)
 - rJAX(Halcyon)

How, cont.

- ★ J-Integra (Linar, www.linar.com)
 - an innovative pure Java-COM bridge, implementing DCOM in Java. It provides both Java-to-COM and COM-to-Java capability.
 - Nov. 8, 1998 (1.0), Sep. 26, 2000(1.3.6)
- ★ Microsoft Virtual Machine(Microsoft)
 - provide both Java-to-COM and COM-to-Java bridge
 - Microsoft, free, works!

Microsoft SDK for Java

- ★ JDK 1.1.4 compliant
- ★ Microsoft Virtual Machine
 - Build 3316, 09/25/2000
- ★ Compiler: `jvc`
- ★ Interpreter: `jview`, `wjview`
- ★ COM tools: `javareg`, `jactivex`

History of Microsoft SDK for Java

- 1.0: Oct. 15, 1996 (JDK 1.0.2)*
- 1.51 June 20, 1997*
- 2.0: Oct. 6, 1997 (JDK 1.1.1, Lawsuit)*
- 2.01: Dec. 1, 1997*
- 2.02: June 26, 1998*
- 3.0: July 16, 1998 (JDK 1.1.4)*
- 3.1: Sep. 2, 1998*
- 3.2: Mar. 18, 1999*
- 4.0: Dec. 6, 1999*
- Jan. 23, 2001 Lawsuit Settlement*
 - Continue shipping for 7 years,
 - but no more Microsoft Java

COM basics

- ★ Interface, Class
 - Class implements several interfaces
 - All call is based on interface pointer
- ★ Automation
- ★ IID, CLSID, ProgID
 - Stored in registry
- ★ RunningObjectTable

Visio and ArchStudio

- ★ Visio: a great drawing tool
 - Automation, VBA
- ★ ArchStudio
 - Design environment for C2 architecture style
 - ArchADT(repository), AEM(run time support)
 - Tools: Jargo, ArchShell

Call Java in COM

- ★ Register any Java class using javareg
 - IID, CLSID, ProgID, type library,
 - COM server: VM, msjava.dll
- ★ CreateObject in VBA
 - VM will create COM Callable Wrapper (CCW) over Java object
- ★ Use COM reference to call function
 - Automation Interface by VM

Call COM in Java

- ★ Use jactivex to generate Java files from type library
 - Interface definition, class definition
- ★ In Java, new object and cast to interface

```
COMInterface i = (COMInterface)new COMClass();
```
- ★ Use jview to execute Java
 - VM will create Java Callable Wrapper (JCW) for the COM object

Both are used

- ★ Use Java to write a class, register it as COM object
- ★ Use the generated type library to generate other Java files, use them in another Java to create COM object
- ★ Get the object in VBA

Call Windows in Java

- ★ J/Direct: call any Windows DLL functions in Java

- Special tags: @dll.import, @com

```
/** @dll.import("OLEAUT32", ole) */
```

```
public static native int RegisterActiveObject  
    ( IUnknown obj, _Guid rclsid, int flag);
```

Conclusion

- ★ Microsoft VM provides both COM-to-Java and Java-to-COM integration, in an easy to use way.
- ★ It will be interesting to know how VM itself is implemented
- ★ Future work: using COM events to implement C2 notification

More work after Oct.

- ★ Add notification support
 - Use VBA to implement a COM interface, let Java to call that interface
- ★ Use Microsoft VM for COM/Java integration ONLY
 - So ArchStudio can run as a standard Java application. Microsoft Java talks with Sun Java via RMI
