"Everybody needs your help, but they're not quite sure why": working as an applied statistician in a multi-disciplinary environment

Scott Bartell, PhD
Associate Professor
Program in Public Health, Department of Statistics, and Department of Epidemiology
University of California, Irvine

Thursday, March 10, 2016
4 – 5 p.m., 6011 Bren Hall
(Bldg. #314 on campus map)

Many jobs in statistics require extensive interaction with people who have little formal statistical training but who nonetheless need to design studies and interpret data. Understanding statistical methods is necessary but not sufficient for success in those environments; understanding the terminology and research culture of your collaborators is equally important. In this talk I'll share some of my experiences and hard-won lessons from 20 years of multi-disciplinary research and service on scientific advisory committees for state, national, and international agencies.
