## Statracker Flow

## Market

Sports software is currently a \$389 million market of a \$9 billion youth and adult sports league market.

Market value is estimated to grow to \$5.9 billion by 2022.\*

\*WinterGreen Research

## Future

The application will be available for use by all recreational leagues in the country. Their statistics and each play-by-play will be saved into our database and can be visible on our website. In the distant future, Stat Tracker seeks to offer its service for sports beyond football.

## Problem

Many flag football leagues must manually register players, calculate statistics, and provide game summaries. League owners are searching for an easy and efficient solution to manage their flag football leagues.

## Solution

Statracker is an Android application that provides flag football leagues the ability to record and track statistics during a game with minimal effort.

Teams and individual players can then view their statistics later on the Statracker website for further details. The ultimate goal of this project is to allow all users, whether they are fans of the game or they themselves play, be able to view up-to-date statistics about a certain game quickly and without difficulties.

## Development Cycle

1 | 0

Elicit requirements and features, followed by establishing development schedule

2 | 0

Implemented core key features of the application

3 | 0

Rigorous testing for any bugs/errors

4 | 0

Beta testing from real world flag football leagues

5 | 0

Application is ready for deployment!
