ABSTRACT

This is a sample paper using the format and guidelines required for the *ROSATEA Workshop Proceedings*. It includes instructions for preparing a camera-ready copy of your paper for publication.

Keywords

Guide, formatting instructions, workshop publication, workshop proceedings.

1 INTRODUCTION

The *Proceedings of the International Workshop on the Role of Software Architecture in Testing E(and) Analysis* represent the final archival records of the workshop. To give the proceedings a high quality appearance, we ask that authors follow these guidelines. In essence, we ask you to make your document look as much like this document as possible. The easiest way to do this is simply to replace the text in this document with your own.

This document defines a Microsoft Word style sheet to help you format your text. Styles include Normal, AuthorName, Heading1, etc. In addition to this template for Word, which is available in several file types (Word for Macintosh (word6), Windows (doc), and Rich Text Format (rtf)), electronic templates are available in two file types for Framemaker (version 5 for Macintosh (fm) and module interchange format for Windows (mif)) as well as postscript (ps) and pdf (pdf) files for printing and viewing. Each template file may be downloaded from the ROSATEA web site [1].

2 PAGE LIMIT AND PAGE SIZE

Position papers should be no longer than 5 pages.

All material on each page should fit within a rectangle of 18 x 23.5 cm (7" x 9.5"), centered on the page, beginning 1.9 cm (.75") from the top of the page, with a .85 cm (.33") space between two 8.4 cm (3.3") columns. Use either US Letter or A4 paper. Right margins should be justified, not ragged.

3 TYPESET TEXT

Papers should be prepared on a word processor and printed on a laser printer. Use a 10-point Times font (or other Roman font with serifs, as close as possible in appearance to Times in which these guidelines have been set). Note that different components (such as TITLE, Author, and Heading – see below) use the same font but with different sizes and styles. Please do not use sans-serif or non-proportional fonts except for special purposes, such as distinguishing source code text (e.g., #include <iostream.h>). Fonts similar to Times include Times New Roman, Computer Modern Roman, and Press Using this template file, typeset text uses the paragraph format Normal.

If you do not have a laser printer, then please use the best alternative.

3.1 Title and Authors

The title (18-point bold), authors' names (12-point bold), and affiliations (12-point) run centered across the full width of the page -- one column 17.8 cm (7") wide. Please also include phone numbers and e-mail addresses. See the top of this page for three names with different addresses. Note that each of the names/addresses is centered on a tab (other word processors may do this by putting each name/address in its own table cell in a table with invisible borders). If only one address is needed, center all address text in a single column. For two addresses, use two columns, and so on. For more than three authors, you may have to improvise (if necessary, you may place some address information in a footnote).

3.2 Abstract and Keywords

Every paper should begin with an abstract of no more than 100 words, followed by a set of keywords. The abstract and keywords should be placed in the top left column of the first page. The abstract should be a concise summary of the work and resulting conclusions. Keywords should help readers determine if the paper contains topics in which they are interested.

3.3 Subsequent Pages

For pages other than the first page, start at the top of the page, and continue in double-column format. It is preferable (but not required) that the two columns on the last page are of approximately equal length.

3.4 References and Citations

For citations and references, use either the numbered format – that is, a numbered list at the end of the article, ordered alphabetically by first author, and cited in the text by numbers in brackets [1] – or abbreviated author names followed by the year of publication – also ordered alphabetically by first author at the end of the article, and cited in the text by the paper key in brackets [And92]. See the citation examples in the text and the references at the end of this document. Using this template file, use the style named `numbered-reference` or `abbrev-reference` for the text of each reference.

References should be to published materials accessible to the public. Internal technical reports [SRW97] may be cited *only if* they are easily accessible and may be obtained by any reader (an address to obtain must be provided within your citation). Proprietary information may *not* be cited. Private communications should be acknowledged, not referenced (e.g., [Inverardi, personal communication]).

3.5 Page Numbering, Headers and Footers

Headers, footers, and page numbers should not be included in your paper; page numbers will be added when the *Proceedings* is assembled. You should write page numbers on the back of each page, however, to help ensure that the document is printed in correct order.

4 SECTIONS (STYLE NAME: HEADING1)

The title of a section should be in Times 10-point bold in all capitals. Sections, subsections, and subsubsections should be numbered.

4.1 Subsections (Style Name: Heading2)

The title of subsections should be in Times 10-point bold with only the initial letters of each word capitalized. (Note: For subsections and subsubsections, a word like *the* or *a* is not capitalized unless it is the first word of the heading.)

4.1.1 Subsubsections (Style Name: Heading3)

The heading for subsubsections should be in Times 10-point italic with initial letters of each word capitalized.

5 FIGURES

Figures should be inserted at appropriate points in your text. Figures may extend over the two columns up to 17.8 cm (7") if necessary. Black and white photographs (not Polaroid prints) may be mounted on the camera-ready paper with glue or double-sided tape.

6 LANGUAGE, STYLE AND CONTENT

English is the written and spoken language of ROSATEA. Spelling and punctuation may consistently follow any dialect of English (e.g., British, Canadian or US). Hyphenation is optional.

- Write in a straightforward style. Use simple sentence structure. Try to avoid long sentences and complex sentence structures. Use semicolons carefully.
- Briefly define or explain all technical terms.
- Explain all acronyms when they first appear in your text, such as, “World Wide Web (WWW)”.
- Explain “insider” comments. Be sure that the entire workshop audience will understand any reference whose meaning you do not explain.
- Avoid or explain puns, jokes and colloquial language. Humor and irony are difficult to translate.
- Use unambiguous forms for representing culturally localized concepts, such as times, dates, and currencies. (e.g., 1/5/96 could be either January 5th or 1 May, and 7:00 could be 7:00 am or 1900).

Authors are responsible for making sure that their work is conducted in a professional and ethical manner [And92], including (but not limited to) fully informed consent of participants in studies, protection of personal data (e.g., [2]), and permission to use others’ copyrighted materials.

7 INFORMATION AND QUESTIONS
