INF 212 Analysis of Programming Languages
Project 1 -- Lambda Calculus
Due date: 4/15
Demo date: 4/16

**Goal:** Implement an interpreter for the lambda calculus.

You can do it in any language you like.

**Assessment:** I will give you a couple of programs to test with your interpreter and I will ask questions about your implementation.

**Tip:** It's ok to search for existing solutions and reuse them. I expect, however, that you take ownership of the code and that you understand everything that is going on as if it were your own code.
