

Visual Memory and Imagery

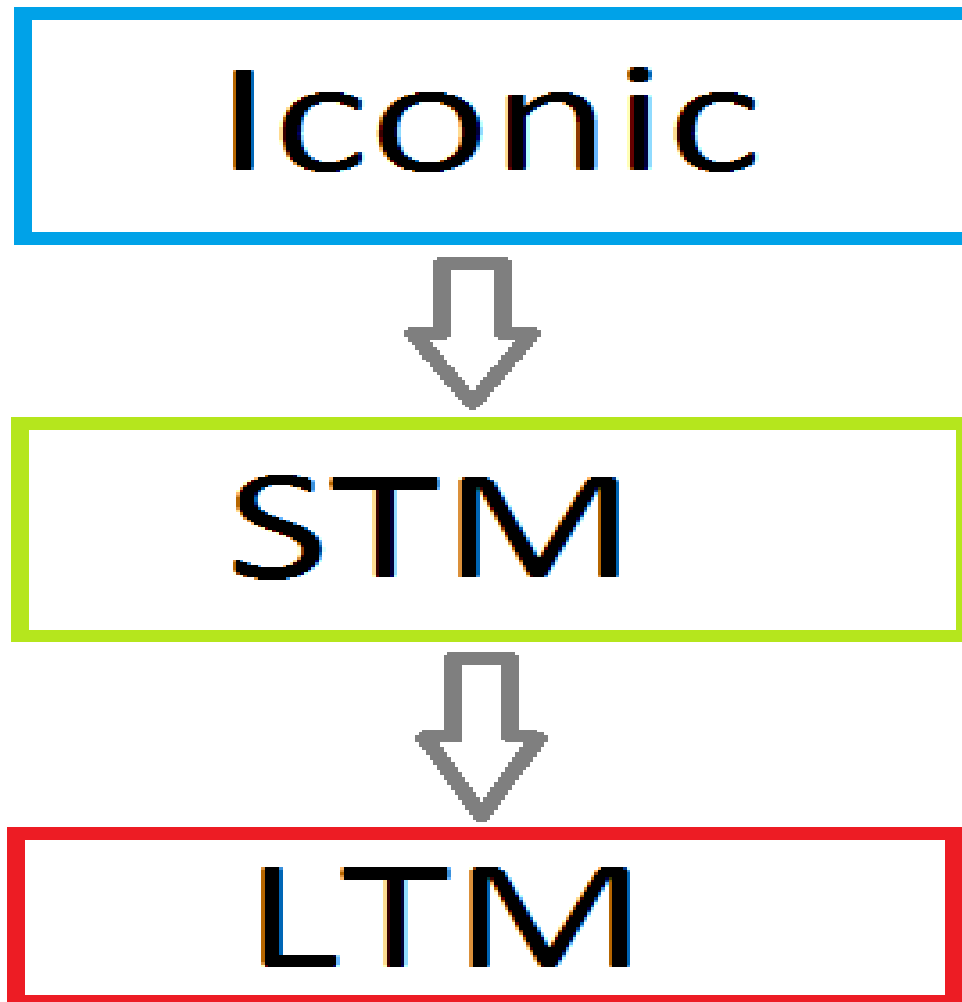

Visual Memory

- Iconic Memory
- Visual STM
- Visual LTM
- Memory Dynamics

Three Memory Systems

Classifying different memory systems

- Duration
- Content
- Loss
- Capacity

Iconic Memory

- Almost immediate (<1 seconds)
- Loss → Decay or Masking
- Change blindness
- Letter test

Change Blindness

Letter Test

- George Sperling ~1950s
- Span of apprehension
- Presented with up to 20 letters for less than 100 ms.
- Later did Partial Report Procedure

Q	T	P	R	F
A	V	K	L	E
W	C	B	M	H

L U Q I P

X B S E H

K Z G N V

A

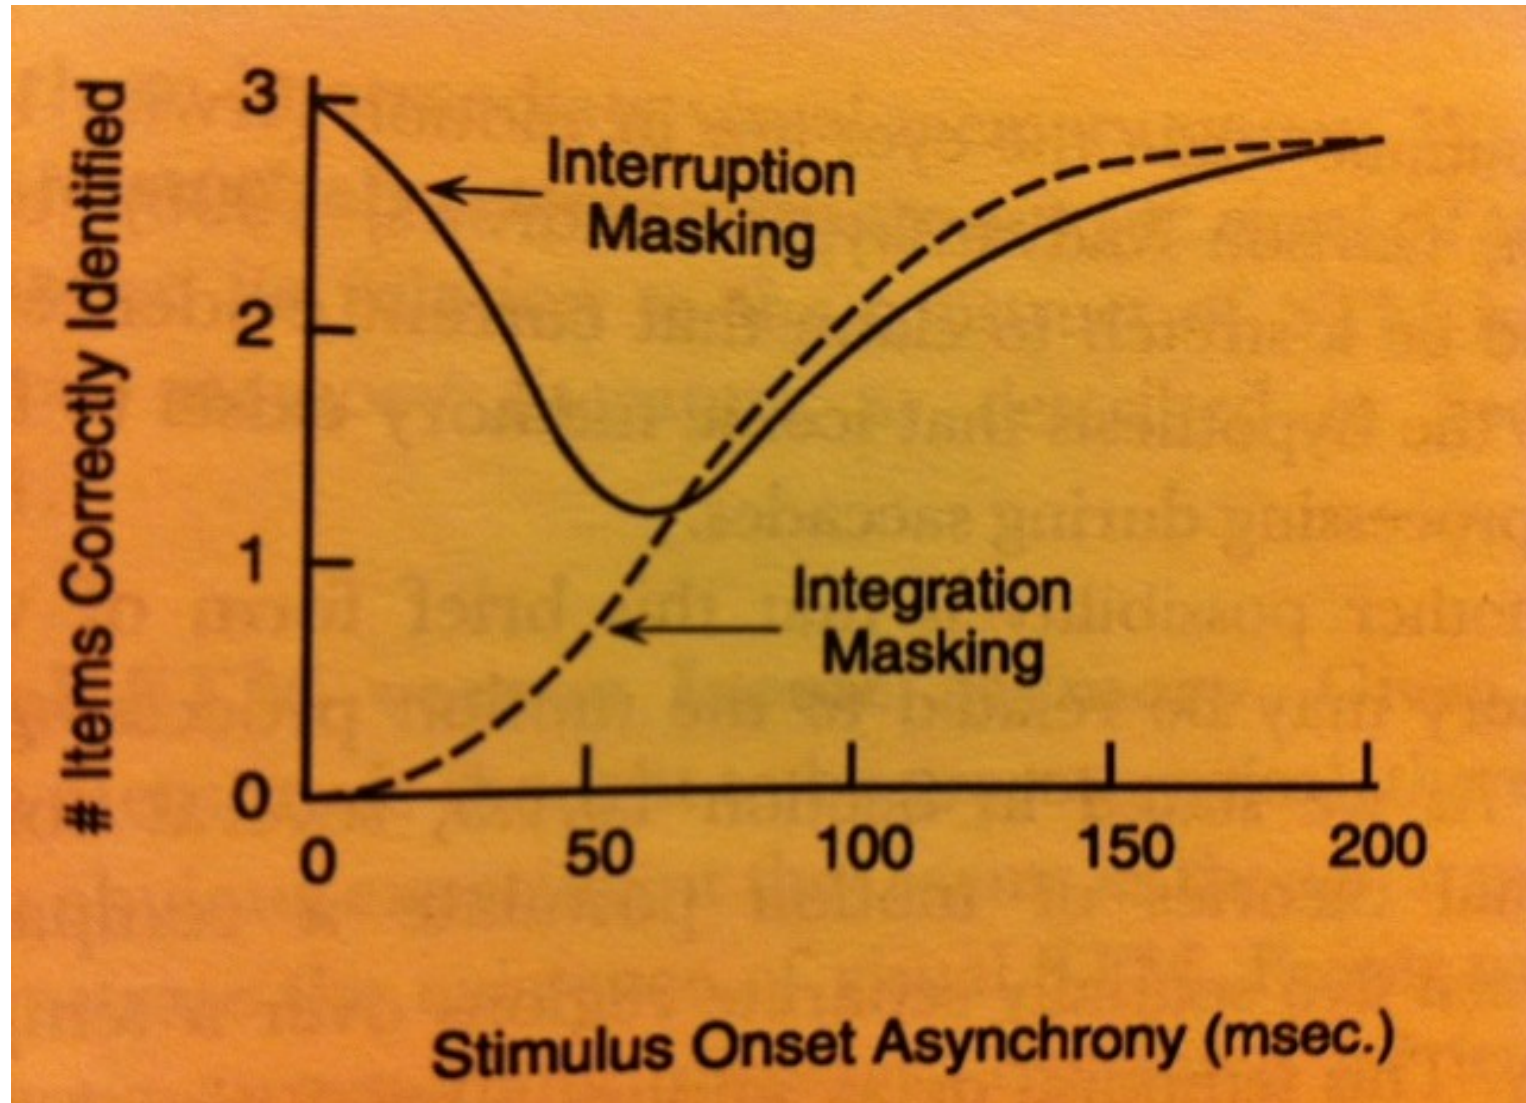

B

Masking

- Forward masking vs backward masking
- Homogeneous vs noise vs pattern

Interruption vs Integration

Visual STM

- Lasts up to 10 seconds
- Loss through replacement
- Random patterns test
- Serial position in list test
- Dots, dots, and more dots

Serial Position in List

- Presented with list of letters
- After a delay (~20 seconds) asked to recall letters in any order.
- What is probability user recognizes letter in relation to position?

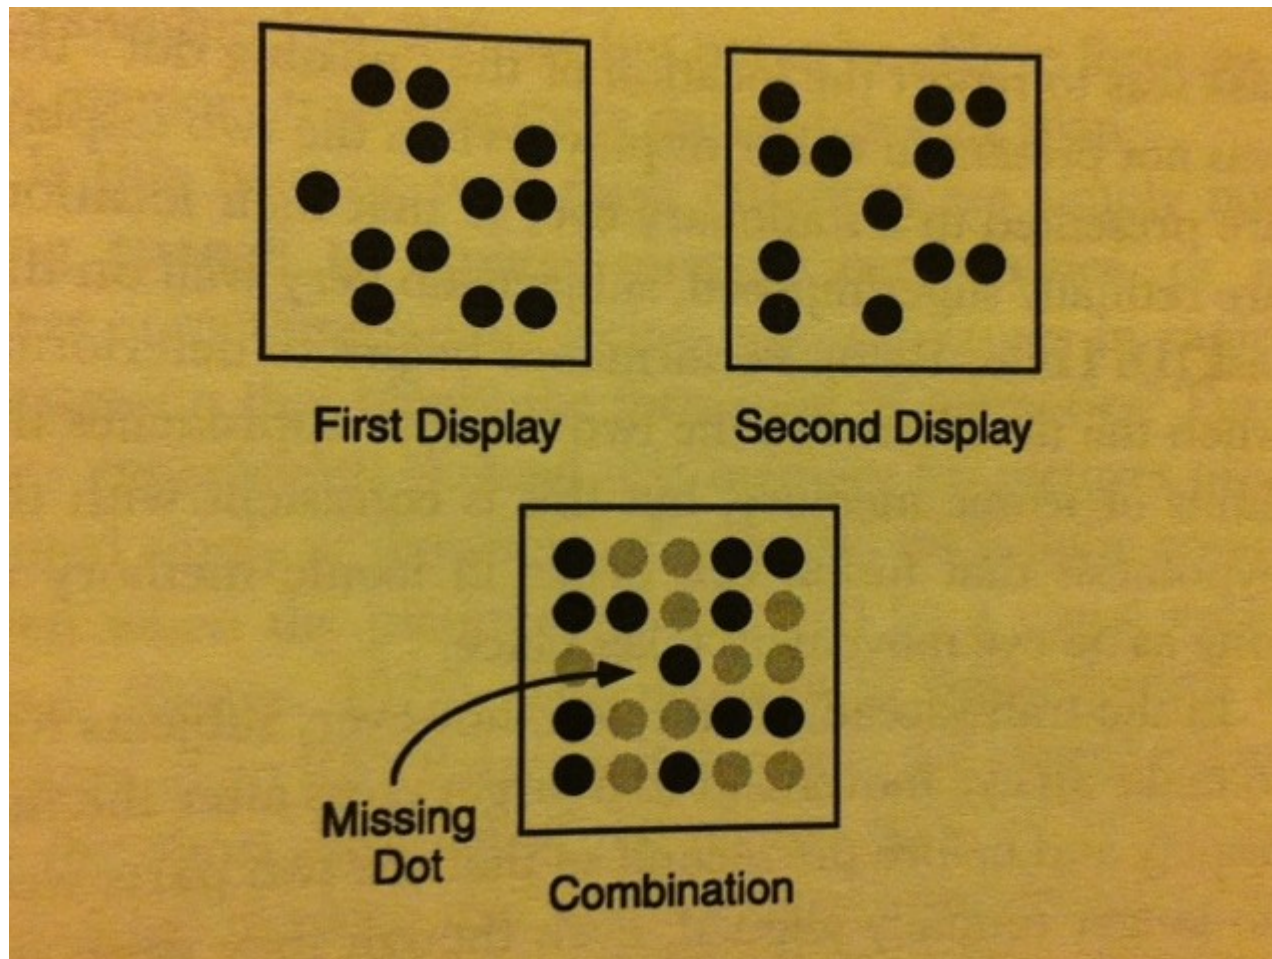

• W K L O Q N
I E M J R B
V F X T Z A

Frequency of Recall

Dots

- Irwin, Yantis, and Jonides (1983)

Games

- Telephone
- Number remembering

When does the memory become available?

- Rapid Serial Visual Presentation (RSVP)
- 16 photographs, 1 every 2s or 10 every second.
- Try to recognize if you have seen a picture
- Conceptual Masking

Visual LTM

- Seems to be no limit
- Three types {Semantic, Procedural, Episodic}
- Recall vs Recognition
- Mnemonic devices
- Photographic memories

Three types of LTM

- Semantic – general knowledge of generic concepts
- Procedural – general knowledge of general skills
- Episodic – information about experiences

Visual Routines

- Transforming images for variety of tasks

Recall vs Recognition

- “I forget a name, but I never forget a face”
- Recall test: reproduction of to be remembered words.
- Recognition test: given initial set of images, given image and determine if new or old.

Pennies

Pennies cont.

- Only 42% got it correct
- Despite seeing it often
- (Nickerson and Adams, 1979)
- 7% chance if at random

Mnemonic Device

- PEMDAS

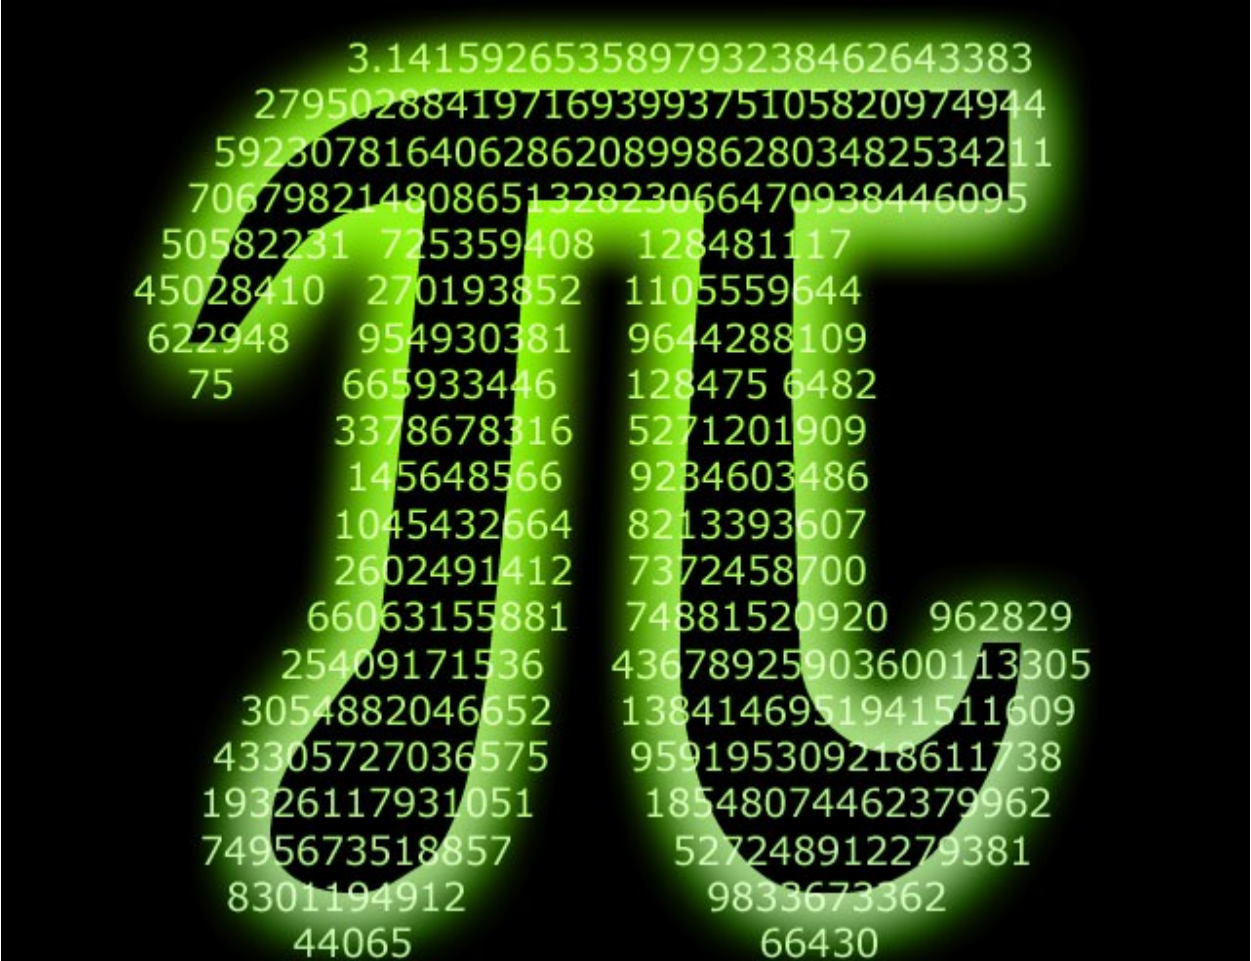

$$X = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$$

Pi

- Chao Lu with 67,890 digits!

```

$e=2.718281828450945...$

- 2 (0) dollar bill, 7 president, president in the year 1828, 1828 again, 45-90-45 triangle

Dual Coding Theory

- Imageable words (book, hammer, computer)
- Nonimageable words (faith, life, freedom)
- Paivio (1969) proposed there are two separate storage systems in LTM
 - One for verbal
 - One for linguistic information

Objection to Dual Coding

- (Dodson, Johnson, & Schooler, 1997; ...)
- Half subjects asked to describe face in detail
- Other half doing mindless task (counting backwards by 3's from 605)

Photographic Memory

- Eidetic imagery
- 7% of children (Leask, Haber, & Haber, 1969)

Perfect LTM?

- 33 confirmed
- Not sure if genetic or molecular
- Recall any day instantly
- 99% accuracy!

Mnemonists

- Strong ability to remember items
- S was studied by A. R. Luria (1968)
- 50 digits in 3 minutes, forever.
- When heard 2000 Hz said “It looks something like fireworks tinged with a pink-red hue. The strip of color feels rough and unpleasant and it has an ugly taste...”

Neuropsychology

- Amnesia
- Retrograde amnesia
- In media

Sleep

- Tarnow's theory – LTM is stored in dream format
- Doesn't matter how we learned information.
- How does sleep affect our memory?

Sleep = better memory?

- Sleep benefits memory retention – Ebbinghaus 1885
- Payne & Holtz
- Given word pairs, some at 9am some at 9pm.
- Tested 30 minutes later, 12 hours, or 24 hours later

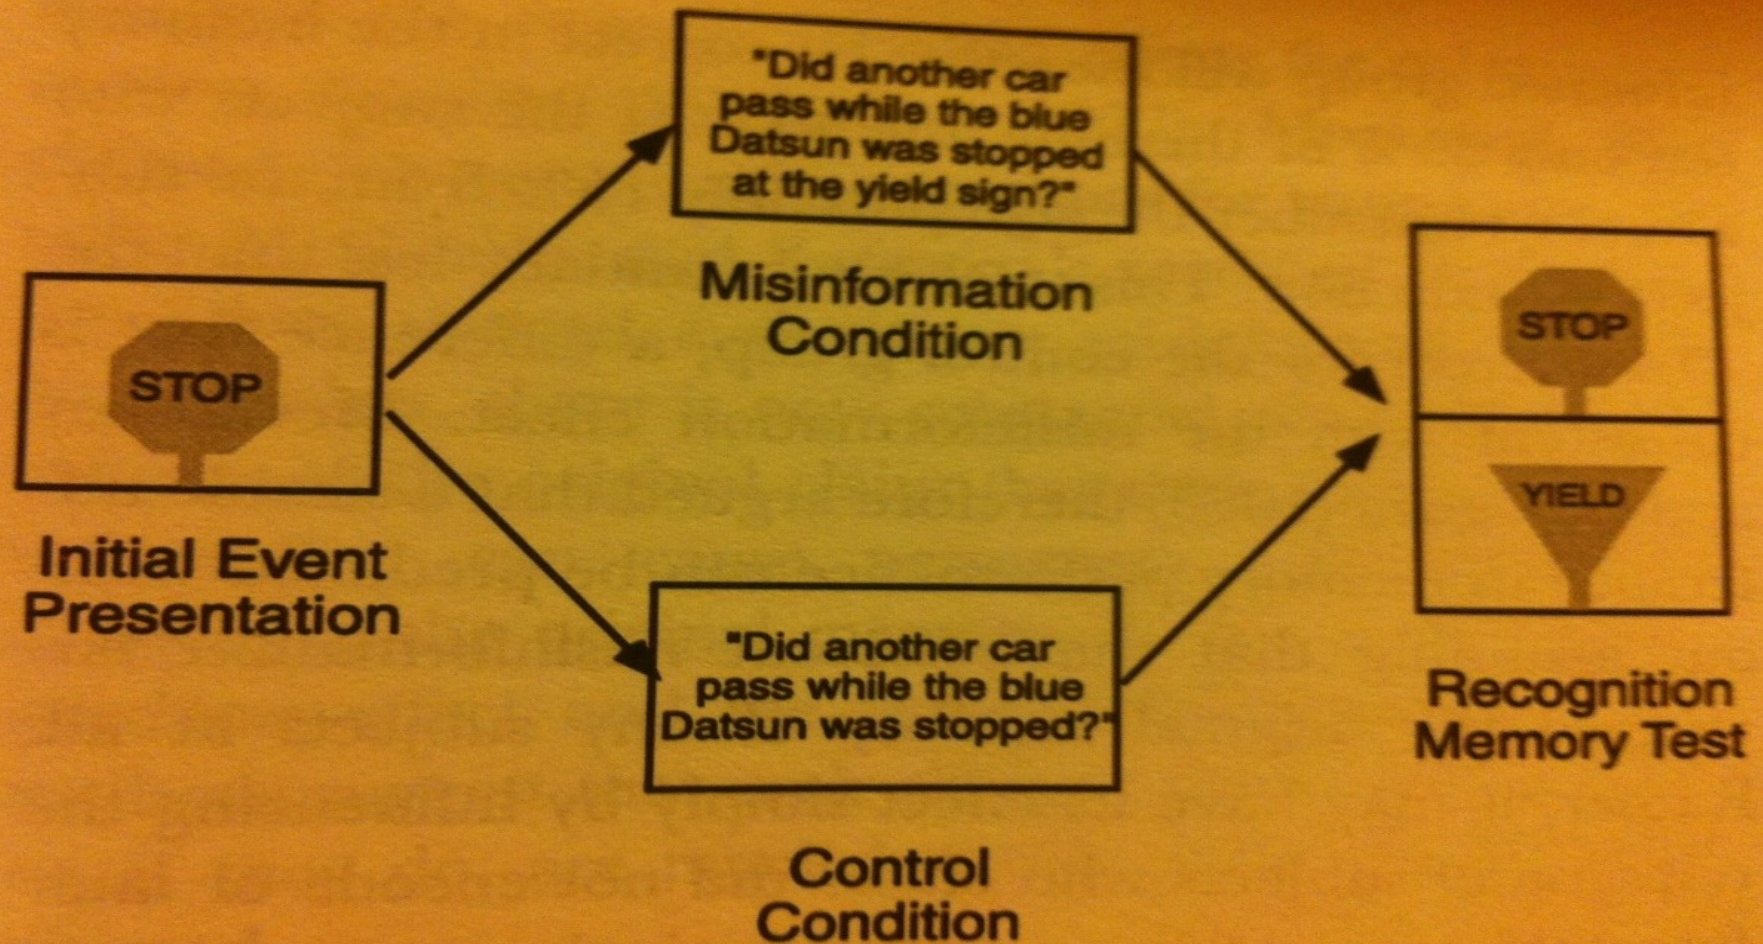

Memory Dynamics

- Misinformation effect
- Car crash case
- Representation momentum

Reproduced figure	Verbal labels	Stimulus figures	Verbal labels	Reproduced figure
	← Curtains in a window		Diamond in a rectangle →	
	← Seven		Four →	
	← Ship's wheel		Sun →	
	← Hourglass		Table →	
	← Kidney bean		Canoe →	
	← Pine tree		Trowel →	
	← Gun		Broom →	
	← Two		Eight →	

Cars

Misdirection

LOOK OVER THERE!

Fooled You, Didn't We?

Misdirection?

- Did you notice there were only 4 fingers?

Visual Imagery

- Analog/propositional debate
- Mental transformations
- Reinterpreting images

Problems

- Images are private
- Not directly accessible
- Thrown out → DEBATE

Analog Position

- Picture metaphor theory
- “The Mind's eye”
- Pictures in the head

Propositional Position

- Descriptions constructed of abstract propositions
- Duck/Rabbit

Not Analog?

- Statue of Liberty
- Taj Mahal
- Back of the US \$1 bill

Arguments against analog

- Arrows on the one dollar bill?
- How many posts on the Taj Mahal?
- How many spikes on the statue of liberty?

Mental Transformation

- If images picture like (analog), they should be able to be transformed continuously.
- Executed in a single step.

Shepard & Metzler

- Showed pairs of 3D cubes
- Either identical or mirror images
- Reaction time increased linearly with increasing angles

Reinterpreting Images
