

# Extra Topic – Collaborative HCI Issues

# Human-computer Interaction Consortium

- Founded in 1980's
- Goals (quoted from their Web site)
  - Construct a scientific foundation for Human-Computer Interaction
  - Promote research, education, and training
  - Promote technology transfer and information exchange
  - Participate in collaborative research
  - Develop practical applications for Cognitive Engineering

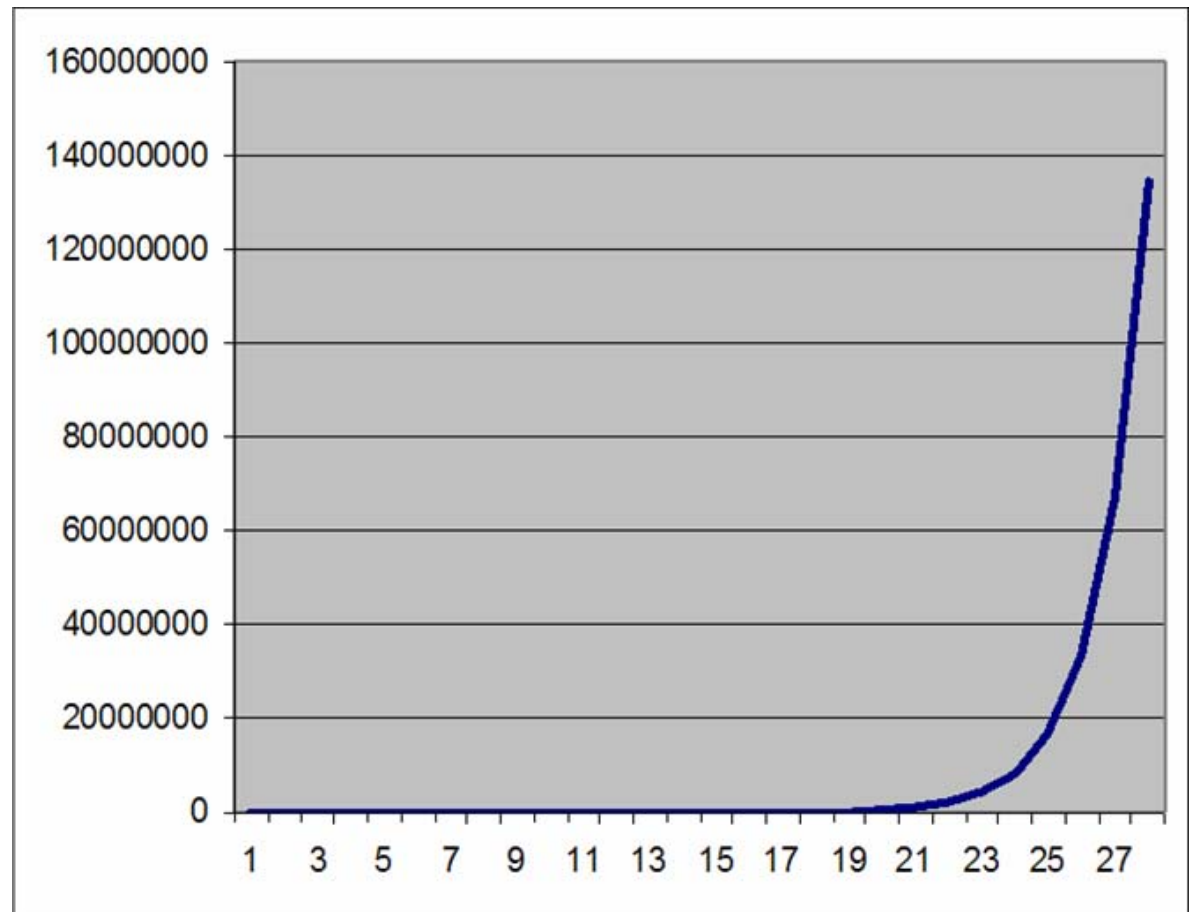

# Members

- Carnegie Mellon University
- Drexel University
- Georgia Institute of Technology
- Pennsylvania State University
- Stanford University
- University of California, Irvine
- University of Colorado
- University of Michigan
- Virginia Polytechnic Institute and State University
- Fraunhofer Institute for Integrated Publication and Information
- FX Palo Alto Laboratory
- Google
- IBM T.J. Watson Research Center
- Microsoft
- Mitsubishi Electric Research Laboratories
- NASA - Ames Research Center
- National Institute of Advanced Industrial Science and Technology
- National Institute of Standards and Technology
- Nokia
- Palo Alto Research Center (PARC)
- Sun Microsystems, Inc

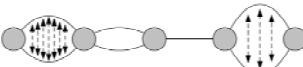

# Grudin – The Exponential Curve

- Change is sudden

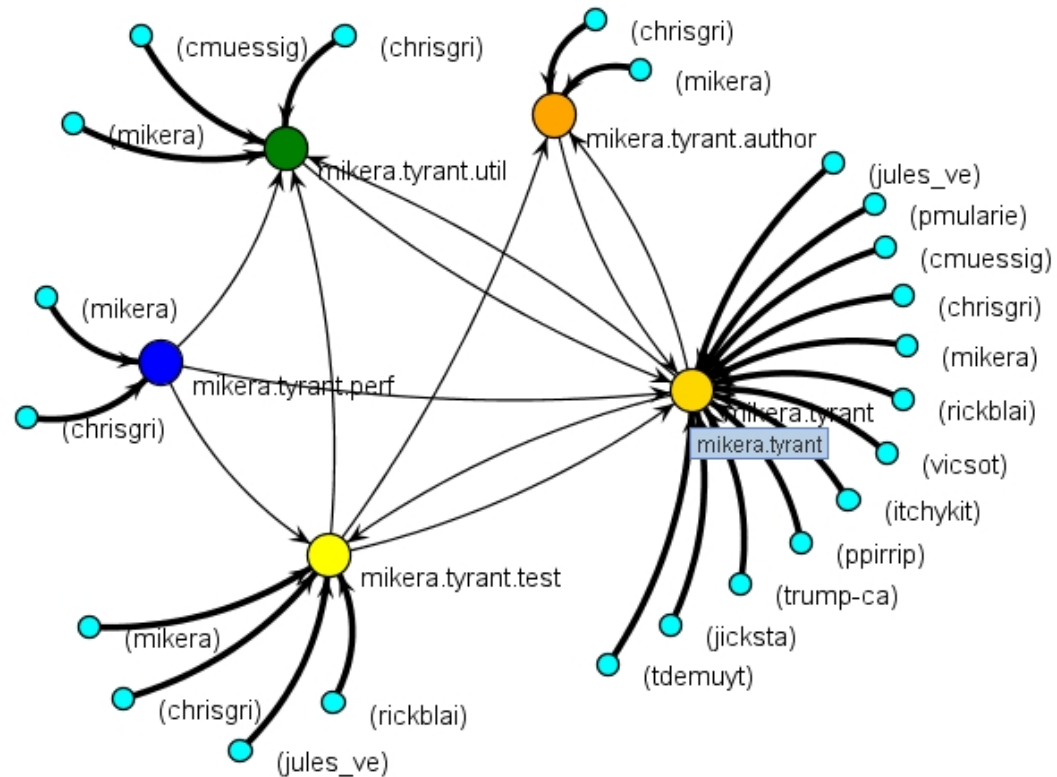

# Redmiles

- Interfaces must accommodate both formal and informal processes.

	Conceptual Visualization	Strengths	Weaknesses
<i>Formal process-based coordination</i>		Scalable; Control; Insulation from other activities; Group-centric	Resynchronization problems; Insulation becomes isolation
<i>Informal, awareness-based coordination</i>		Flexible; Promotes synergy; Raises awareness; User-centric	Not scalable; Requires extensive human intermediation
<i>Continuous coordination</i>		Expected to be the strengths of both formal and informal coordination	To be discovered by future research

# Redmiles

- And, finding the right people

# Chi / Pirolli

- Quoting Bert from a forthcoming book on Structural Holes
  - Bridging gaps between expertise

# Carroll

Table quoted from Carroll talk at HCIC 2006, Frasier, Co.

- “Beyond being aware”
  - There are many kinds of activities to be aware of and at different levels of generality.

<i>Human development</i>	Reconcile different levels of performance and approaches to problems by synthesizing zones of proximal development
<i>Social capital</i>	Nurture & exploit mutual interdependencies; access broader resource networks
<i>Community of practice</i>	(Tacitly) leverage and regulate shared praxis through enactment and improvisation
<i>Common ground</i>	Protocol for continual testing and signaling of shared knowledge and beliefs
