

Project Assignment 2 – Cognitive Walkthrough – Due May 15, 2008 in class (in lieu of weekly example)

As discussed in class, this assignment is about applying the Cognitive Walkthrough technique to evaluate a visualization of your choice.

Therefore choose a visualization (including any you have used as an example previously).

Decide on a simple and typical task / goal / question that a user of the visualization might have. The task should have at least 5 steps but not more than 9.

Document the application of the Cognitive Walkthrough technique based on that task with the example visualization. Follow the pattern of documentation exemplified in the class slides for the Cognitive Walkthrough from Week 6. Be sure to answer each question of the cognitive walkthrough for each step and to include a screen capture for each key step.

Turn the assignment as a PPT or PDF into Checkmate before class on May 15.
