

Ideas for projects CMSC828X-2019

For a project class students can be engaged in either an idea of their own that they will explore (theoretically and/or empirically). Alternatively, you can select a paper as a basis of your project. Projects are for individual students but you can also get in pairs if justified by the magnitude of the project (e.g., multiple papers involved or more in depth exploration.) In more details:

- Come up with your own idea. Must be relevant to the class.
- Join research by selecting a paper, presenting it to the class and writing a project report summarizing and analyzing the paper. I recommend get in touch with authors of the selected paper(s) to get slides. Also, it is desirable, whenever possible to re-evaluate the code in work involving empirical evaluation. A list of papers from which you can select are advised below. These include papers based on UCI research and known researchers in the field as well as a subset of UAI 2018 paper. Earlier UAI papers (2017) can be considered too.
- Some papers from UCI, UAI, CP and leading researchers are below.

Example Projects from the previous course
