1. Tentative grades through midterm are posted in EEE Gradebook
   - Tentative grades were calculated on 90% midterm, 10% homework
   - Tentative grade is approximate, not fine-tuned
   - So for example, 84 and 86 both mean that you are very close to the A/A- cutoff.

2. Final exam score may raise your midterm exam score.
   - I will compute a midterm exam score based on the final exam score, by
     1. Determining where your final exam score falls on a Gaussian curve fit to the final exams
     2. Computing the midterm score at roughly the same position on a Gaussian curve fit to the midterm
   - I will replace your actual midterm score by your computed midterm score if this works to your advantage.
