Mid-Term Eval update

- Thanks for the compliments and constructive criticism
- How the course is going to change as a result:
  - no more crossword puzzle quizzes
  - watch the time closely
  - more group work
  - more focussed card questions
  - post Assignment #3 grade estimate

User Interaction: Intro to Multi-Touch Tools

Asst. Professor Donald J. Patterson
INF 133 Fall 2011
Multi-Touch Approach #1

- Design specific multi-touch/gesture events that you can register for:
  - Pinching movements (in or out)
    - meaning zoom out or zoom in
  - Rotate: Two fingers moving in opposite semicircles is a gesture meaning rotate.
  - Swipe: Three fingers brushing across the trackpad surface in a common direction.
  - Scroll: Two fingers moving vertically or horizontally is a scroll gesture.
Multi-Touch Approach #1

- **Advantages:**
  - Simple to code
  - Library/OS does all the work

- **Disadvantages**
  - No flexibility
  - Limited to supported events
Multi-Touch Approach #1

- Examples (demo):
  - Document browsing in Preview
  - Zoom
  - Scale
  - Swipe
Multi-Touch Approach #2

- Blob tracking by program
- A program receives information about the location/“pressure”/orientation of multiple touches
- Each touch gets an id to uniquely identify it
- This is a stream of data
  - continuously updating locations and ids
Multi-Touch Approach #2

- **Advantages**
  - Supports unlimited numbers of touches
  - two hands / multiple people
  - Programs can have gestures that make unique sense for them
  - OS does a lot of work to find and report blobs
Multi-Touch Approach #2

- Disadvantages
  - Each program has to figure out all events itself
    - Was that a pinch?
    - Was that a rotate?
    - Where is the thumb?
Multi-Touch Approach #2

- Examples
  - MacMultitouch Demo
  - FingerMgmt
Multi-Touch Approach #3

- Create your own event layer for everyone b/c
  - Everyone wants to detect triangle touches
  - Everyone wants to interpret for multiple people
  - Everyone needs a “tiptap” interaction
Multi-Touch Approach #3

- **Advantages:**
  - Scalable (Other people can use it)
  - Allows completely new interface design
    - “3-finger pinch”
  - Lots of potential for innovation

- **Disadvantages**
  - Lots to code
  - Limited application support
Multi-Touch Approach #3: Better Touch Tool (http://boastr.net/)
Multi-Touch Approach #4

- Grayscale input
  - A program receives a stream of images
  - Darker (or lighter) colors indicates pressure or proximity
Multi-Touch Approach #4

- Advantages
  - Maximum flexibility
  - Not restricted to “finger touch” paradigm
  - Can recognize a “cup down” event for example
Multi-Touch Approach #4

- Disadvantages
  - This is full-fledged computer vision
  - Different technologies generate different quality images
  - Robustly and consistently recognizing events is hard.
Multi-Touch Approach #4

- **Examples**
  - **iShred**
    - [http://www.youtube.com/watch?v=eZpnzzKbY2I&feature=player_embedded](http://www.youtube.com/watch?v=eZpnzzKbY2I&feature=player_embedded)
  - **Microsoft Surface**
    - [http://youtu.be/C36rm5ySS4c4](http://youtu.be/C36rm5ySS4c4)
How do you choose?

- How fast do you need to get your application done?
  - #1 is fastest, #4 is slowest

- Who are your users?
  - #1 is the most familiar to users, #4 requires users to adapt

- What is your application?
  - #1 is basically point and click extensions
  - #4 supports crazy gaming/applications

- Are you showcasing multi-touch? or supporting a task?
Our assignment

- Build a multi-touch Java paint application
- No OS support
Our assignment

- Where are we going to get a grayscale input?
- You can build your own
- You can use prerecorded video
Our assignment

- How will we interface to the computer?
- Use standard camera inputs
Our assignment

- How will we process it without OS support?
- We will use Community Core Vision to process the grayscale images
• How will our application get information about multi-touch events?
• Using the TUIO standard and a TUIO library for java
Our assignment

- How will I write a multi-touch application?
- Register for multi-touch events and then respond when you receive them.
