

# Doubly Connect Edge List (DCEL)

Notes from the book by de Berg, Van  
Krevald, Overmars, and Schwarzkopf.

pp. 29-39

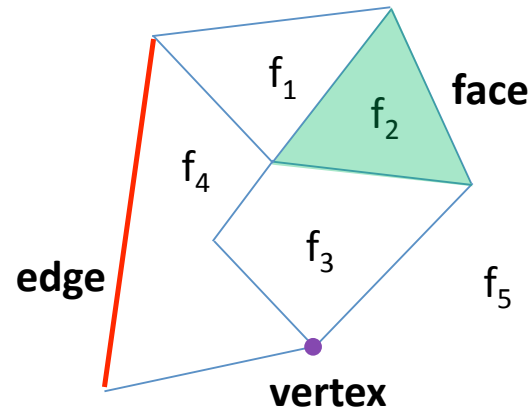

# Doubly Connected Edge List (DCEL)

---

- DCEL is one of the most commonly used representations for planar subdivisions such as Voronoi diagrams.
- It is an edge-based structure which links together the three sets of records:
  - **Vertex**
  - **Edge**
  - **Face**
- It facilitates traversing the faces of planar subdivision, visiting all the edges around a given vertex

# Doubly Connected Edge List (DCEL)

---

- Record for each face, edge, and vertex
  - Geometric information
  - Topological information
  - Attribute information
- Half-edge structure

# Doubly Connected Edge List (DCEL)

---

- **Main ideas:**
  - Edges are oriented counterclockwise inside each face
  - Since an edge borders two faces, each edge is replaced by two half-edges, one for each face

# Doubly Connected Edge List (DCEL)

- The vertex record of a vertex  $v$  stores the coordinates of  $v$ . It also stores a pointer  $\text{IncidentEdge}(v)$  to an arbitrary half-edge that has  $v$  as its origin
- The face record of a face  $f$  stores a pointer to some half-edge on its boundary which can be used as a starting point to traverse  $f$  in counterclockwise order
- The half-edge record of a half-edge  $e$  stores pointer to:
  - **Origin** ( $e$ )
  - Twin of  $e$ ,  $e.\text{twin}$  or  $\text{twin}(e)$
  - The face to its left (  $\text{IncidentFace}(e)$  )
  - **Next**( $e$ ) : next half-edge on the boundary of  $\text{IncidentFace}(e)$
  - **Previous**( $e$ ) : previous half-edge

# Doubly Connected Edge List (DCEL)

Vertex	Coordinates	IncidentEdge
$v_1$	$(x_1, y_1)$	$e_{2,1}$
$v_2$	$(x_2, y_2)$	$e_{4,1}$
$v_3$	$(x_3, y_3)$	$e_{3,2}$
$v_4$	$(x_4, y_4)$	$e_{6,1}$
$v_5$	$(x_5, y_5)$	$e_{9,1}$
$v_6$	$(x_6, y_6)$	$e_{7,1}$

# Doubly Connected Edge List (DCEL)

Face	Edge
$f_1$	$e_{1,1}$
$f_2$	$e_{5,1}$
$f_3$	$e_{5,2}$
$f_4$	$e_{8,1}$
$f_5$	$e_{9,2}$

# Doubly Connected Edge List (DCEL)

Half-edge	Origin	Twin	IncidentFace	Next	Previous
$e_{3,1}$	$v_2$	$e_{3,2}$	$f_1$	$e_{1,1}$	$e_{2,1}$
$e_{3,2}$	$v_3$	$e_{3,1}$	$f_2$	$e_{4,1}$	$e_{5,1}$
$e_{4,1}$	$v_2$	$e_{4,2}$	$f_2$	$e_{5,1}$	$e_{3,2}$
$e_{4,2}$	$v_4$	$e_{4,1}$	$f_5$	$e_{2,2}$	$e_{8,2}$
...	...	...	...	...	...

# Doubly Connected Edge List (DCEL)

---

- **Storage space requirement:**
  - Linear in the number of vertices, edges, and faces

# Doubly Connected Edge List (DCEL)

---

- **Operations:**

- Walk around the boundary of a given face in CCW order
- Access a face from an adjacent one
- Visit all the edges around a given vertex

# Doubly Connected Edge List (DCEL)

---

- Interesting Queries:

- Given a DCEL description, a line  $L$  and a half-edge that this line cuts, efficiently find all the faces cut by  $L$ .

# Doubly Connected Edge List (DCEL)

---

- **Traversing face  $f$ :**

- Given: an edge of  $f$

1. Determine the half-edge  $e$  incident on  $f$

2.  $\text{start\_edge} \leftarrow e$

3. While  $\text{next}(e) \neq \text{start\_edge}$  then

- $e \leftarrow \text{next}(e)$

# Doubly Connected Edge List (DCEL)

---

- **Traversing all edges incident on a vertex  $v$** 
  - Note: we only output the half-edges whose origin is  $v$
  - Given: a half-edge  $e$  with the origin at  $v$ 
    1.  $\text{Start\_edge} \leftarrow e$
    2. While  $\text{next}(\text{twin}(e)) \neq \text{start\_edge}$  then  
 $e \leftarrow \text{next}(\text{twin}(e))$

# Adding a Vertex

---

# Adding a Vertex

- New vertex  $x$
- New edges:  $e_{1,2}'$  and  $e_{1,2}''$
- $\text{IncidentEdge}(x) = e_{1,2}'$
- $\text{Origin}(e_{1,2}') = x$
- $\text{Next}(e_{1,2}') = \text{next}(e_{1,2})$
- $\text{Prev}(e_{1,2}') = e_{1,2}''$
- $\text{IncidentFace}(e_{1,2}') = f_2$
- $\text{Origin}(e_{1,2}'') = \text{origin}(e_{1,2})$
- $\text{Next}(e_{1,2}'') = e_{1,2}'$
- $\text{Prev}(e_{1,2}'') = \text{prev}(e_{1,2})$
- $\text{IncidentFace}(e_{1,2}'') = f_2$
- $\text{Next}(\text{Prev}(e_{1,2})) = e_{1,2}''$
- $\text{Prev}(\text{Next}(e_{1,2})) = e_{1,2}'$
- Delete edge  $e_{1,2}$

# Adding a Vertex

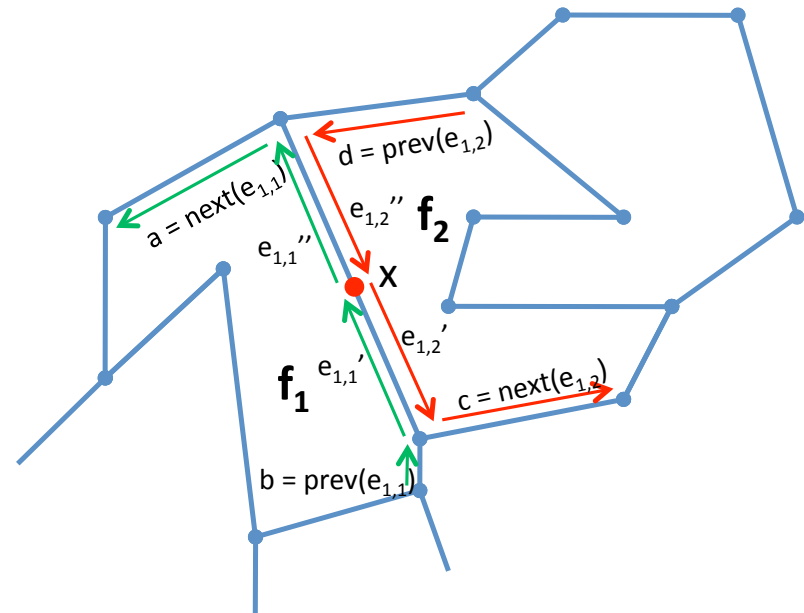

- New edges:  $e_{1,1}'$  and  $e_{1,1}''$
- $\text{Origin}(e_{1,1}') = \text{origin}(e_{1,1})$
- $\text{Next}(e_{1,1}') = e_{1,1}''$
- $\text{Prev}(e_{1,1}') = \text{prev}(e_{1,1})$
- $\text{IncidentFace}(e_{1,1}') = f_1$
- $\text{Origin}(e_{1,1}'') = e_{1,1}'$
- $\text{Next}(e_{1,1}'') = \text{next}(e_{1,1})$
- $\text{Prev}(e_{1,1}'') = e_{1,1}'$
- $\text{IncidentFace}(e_{1,1}'') = f_1$
- $\text{Next}(\text{prev}(e_{1,1})) = e_{1,1}'$
- $\text{Prev}(\text{next}(e_{1,1})) = e_{1,1}''$
- $\text{Twin}(e_{1,2}') = e_{1,1}'$
- $\text{Twin}(e_{1,1}') = e_{1,2}'$
- $\text{Twin}(e_{1,2}'') = e_{1,1}''$
- $\text{Twin}(e_{1,1}'') = e_{1,2}''$
- Delete edge  $e_{1,1}$

# Adding a Vertex

- If  $e_{1,1}$  was starting edge of  $f_1$ , need to change it to either one of the new edges
- If  $e_{1,2}$  was starting edge of  $f_2$ , need to change it to either one of the new edges

# Other Operations on DCEL

---

- **Add an Edge**
  - Planar subdivision
  - e is added
  - DCEL can be updated in constant time once the edges a and b are known
