

Software Process Simulation and Modeling: A Review

Walt Scacchi
Institute for Software Research
UCIrvine
Wscacchi@uci.edu

<http://www.ics.uci.edu/~wscacchi/Presentations/ProSim03/Keynote>

Overview

- ProSim, I SPW, FEAST/IWSE
- ProSim tools, techniques, concepts
- Results, findings, accomplishments
- Emerging R&D opportunities
- Conclusions

ProSim, I SPW, FEAST/IWSE

- ProSim roots: Intern. Software Process Workshops 1980-1990s (ten)
- ProSim Workshop legacy: 1998-2003 (four)
 - 40 journal papers (*JSS*, *SPIP*)
- ProSim cousins:
 - Feedback, Evolution and Software Technology (FEAST)
 - Intern. Workshop on Software Evolution

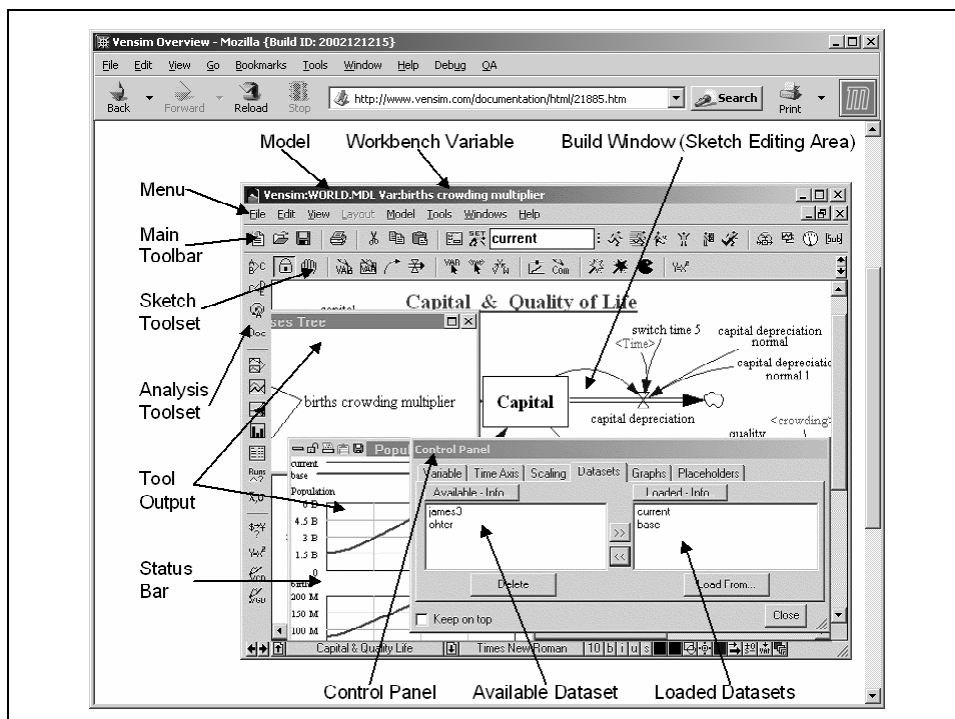

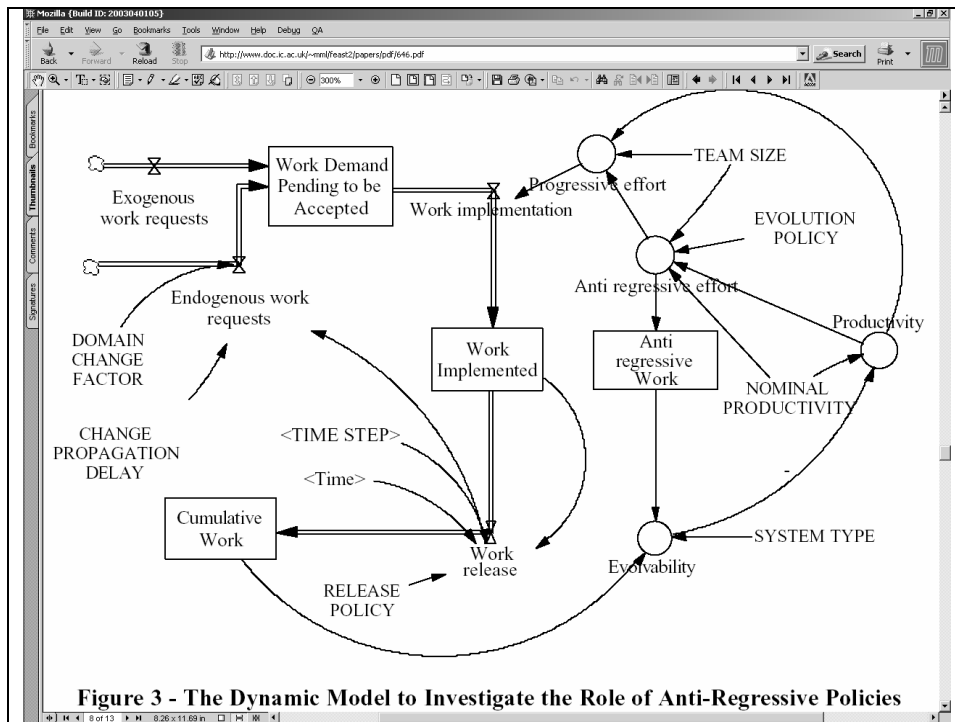

ProSim Focus Areas

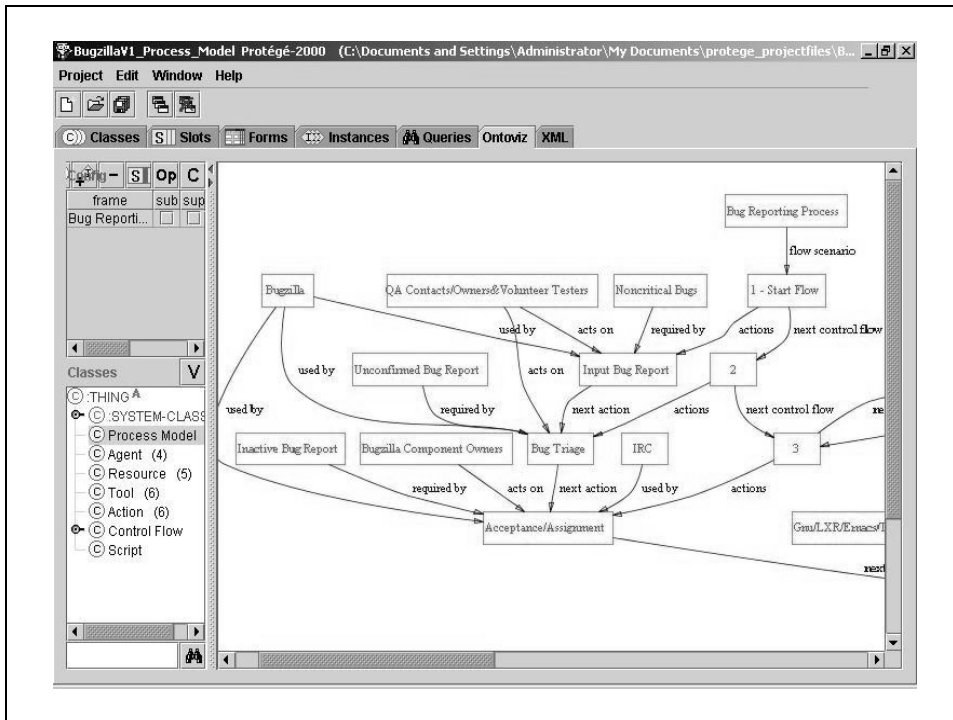

- Software Process Simulation and Modeling
 - Project modeling and simulation
 - Process simulations and simulators
 - COTS vs. custom simulation packages
 - Group, team, engineering and evolution processes
 - Centralized and distributed processes
 - Relation to other process engineering activities
 - Analysis, redesign, visualization, scheduling, etc.

ProSim Tools

- Commercial simulation & modeling packages
 - Discrete-event
 - Systems dynamics (continuous systems)
- Research prototypes
 - Knowledge-based systems
 - Multi-agent systems
 - Distributed systems
 - Model-driven process support environments
 - Meta-modeling/process ontology interpreters

ProSim Techniques

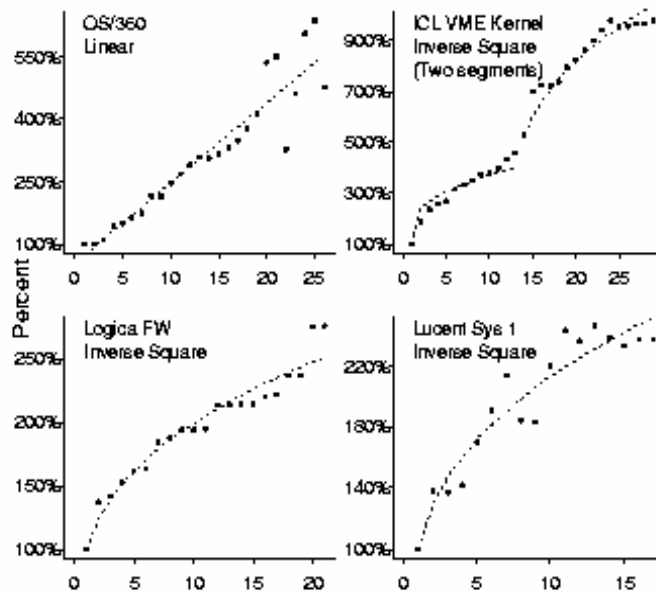

- *Descriptive* M&S: Collect empirical data on existing software processes to reproduce observed patterns, or to improve them
- *Pro/Prescriptive* M&S: Construct M&S that demonstrate advantages of new processes compared to some real/imaginary baseline
- *Experimental* M&S: Construct M&S that test theoretical propositions or enable exploration of emerging concepts

ProSim Engineering Techniques

Meta-modeling	Visualization	Instantiation and enactment
Modeling	Prototyping and walkthrough	Monitoring and measurement
Analysis	Change management	History capture and replay
Simulation	Integration	Repair and Improvement
Redesign	Environment generation	Evolution and asset mgmt.

ProSim Concepts

- Meta-modeling vs. modeling
- Model-driven process support environments
 - Simulators, PSE/IDEs, Web-based process hypertext/media
- Process improvement via simulation, analysis, and redesign
- Process depth vs. breadth

Results, Findings, Accomplishments

- Identifying high-yield and pathological processes and process domains
- Software evolution
- Software process improvement/redesign
- Software process vs. business process
- Hybrid simulations/models
- Process modeling languages
 - JIL, PML, xPADL, BPEL4WS (?)

A complex SDLC process model:
a *decomposition-precedence* relationship view
(19 levels of decomposition, 400+ tasks)

Research grant justification and approval
process at Office of Naval Research

Missing Results, Findings, Accomplishments

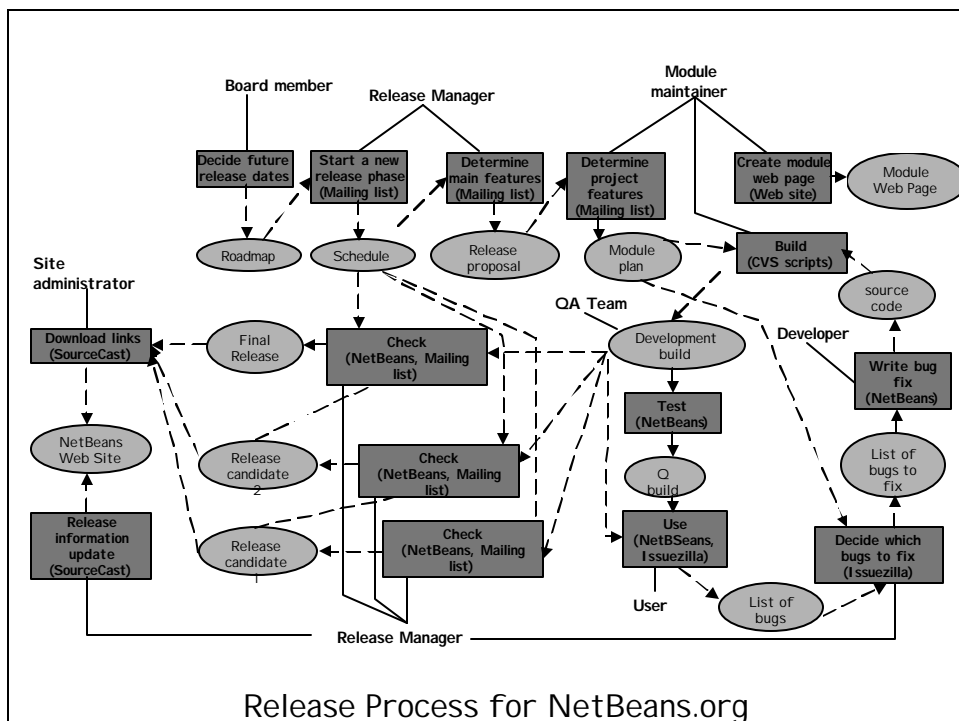

- M&S of CMM assessed processes
- M&S of alternative SDLC process/tool frameworks (Waterfall vs. Spiral vs. Agile)
- M&S software deployment/release, diffusion, and adoption processes
- M&S of software evolution process across
 - Product lines
 - Product/technology generations

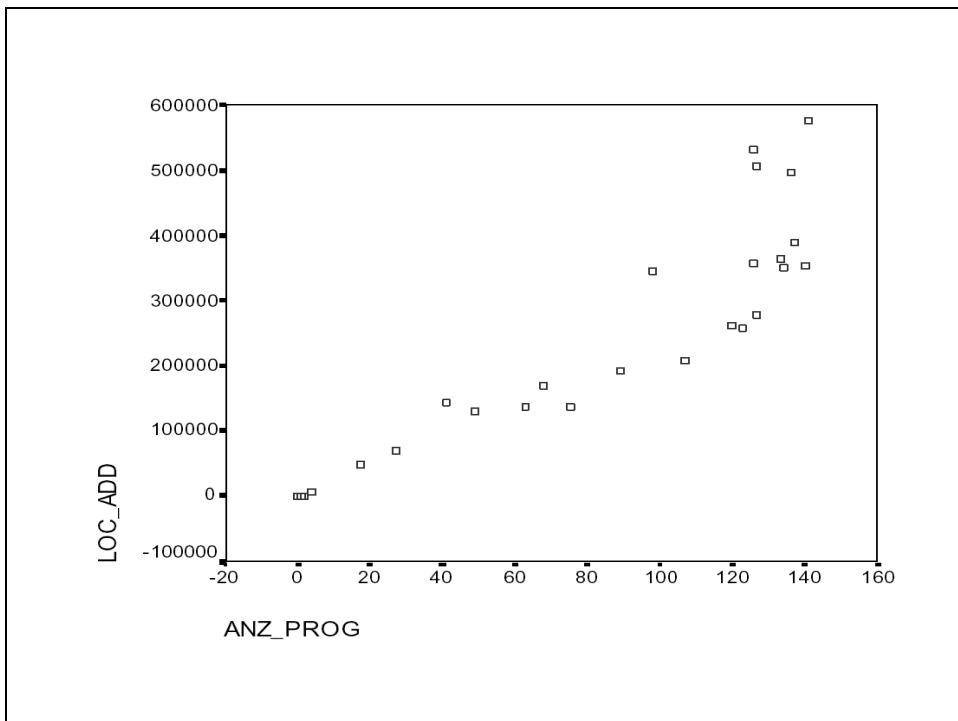

Emerging ProSim R&D Opportunities

- M&S open source software development/evolution processes
- Open source ProSim tools and M&S examples
- Global ProSim interoperability testbeds
- Computer Game-based ProSim tools and techniques

Emerging ProSim R&D Opportunities

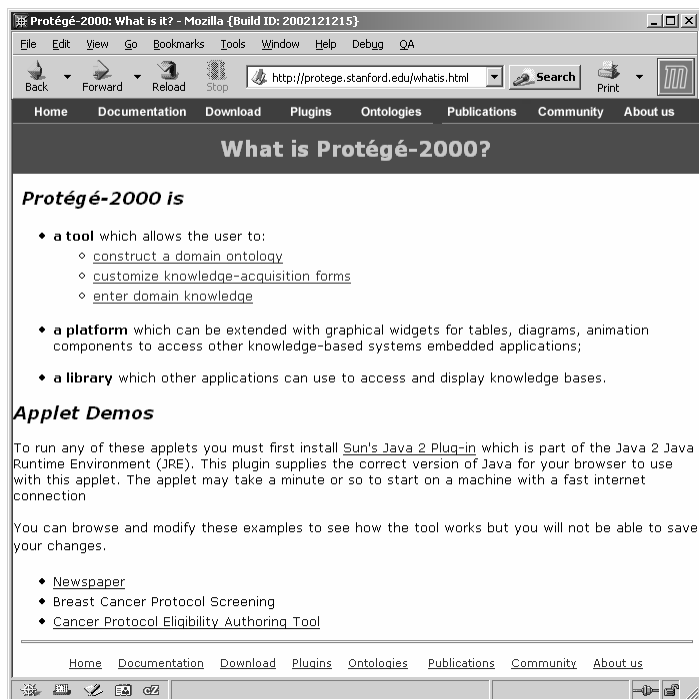

- M&S open source software development/evolution processes

Emerging ProSim R&D Opportunities

- Open source ProSim tools and M&S examples

- Global ProSim interoperability testbeds

Emerging ProSim R&D Opportunities

- Computer Game-based ProSim tools and techniques

Conclusions

- R&D in Process Simulation and Modeling is active, sustained, growing
- Systems Dynamics remains the major mode of ProSim research, though this may require rethinking
- ProSim has produced substantial results and accomplishments
- New opportunities for ProSim R&D are apparent and high value
